

*Research article/Araştırma makalesi***Vascular Plants of Mudanya Cost (Bursa, South Marmara/Turkey)**Ruziye DAŞKIN *¹¹ Uludag University, Faculty of Arts and Sciences, Department of Biology, 16059, Görükle, Bursa, Turkey**Abstract**

This study, carried out between 2002 and 2011, presents the vascular plant flora of the cost of Mudanya District (Bursa province, South Marmara). A total of 252 taxa belonging to 55 families and 181 genera were determined. The distribution of phytogeographic elements is as follows: 58 (23 %) Mediterranean, 17 (6.8 %) Euro-Siberian, 2 (0.8 %) Irano-Turanian and 175 (69.4 %) pluriregional or unknown. According to the number of taxa, the richest families are Asteraceae (43), Poaceae (33), Chenopodiaceae (12), Caryophyllaceae (12), Brassicaceae (11), Apiaceae (11) and the richest genera are *Atriplex* L. (6), *Euphorbia* L. (5), *Crepis* L., *Plantago* L., *Veronica* L., *Cyperus* L. (4), *Rumex* L., *Papaver* L., *Geranium* L., *Hypericum* L., *Inula* L. and *Echium* L. (3). Four endemic taxa (*Campanula lyrata* Lam. subsp. *lyrata*, *Verbascum bombyciferum* Boiss., *Ballota nigra* L. subsp. *anatolica* P. H. Davis, *Lavandula stoechas* L. subsp. *cariensis* (Boiss.) Rozeira), and one rare taxa (*Pancratium maritimum* L.) were determined in the study area. Furthermore, factors affecting vascular plant diversity of the study area were given.

Key words: Seashore vascular plants, Coastal dunes, Mudanya district, Bursa, South Marmara

Mudanya (Bursa, Güney Marmara) Sahilinin Vasküler Bitkileri**Özet**

2002 ve 2011 yılları arasında yapılmış bu çalışma Mudanya ilçesi (Bursa, Güney Marmara) sahilinde yetişen vasküler bitkileri içermektedir. Alandan 55 familya, 181 cinsde ait toplam 252 takson tescis edilmiştir. Taksonların fitocoğrafik elementlere göre dağılımı 55 (% 22) Akdeniz, 17 (% 6.8) Avrupa-Sibirya, 3 (% 1.2) İran-Turan ve 175 (% 70) çok bölgeli ya da bölgesi bilinmeyenler şeklindedir. Takson sayısına göre en zengin familyalar; Asteraceae (42), Poaceae (33), Chenopodiaceae (12), Caryophyllaceae (12), Brassicaceae (11), Apiaceae (11) olup en zengin cinsler ise *Atriplex* L. (6), *Euphorbia* L. (5), *Crepis* L., *Plantago* L., *Veronica* L., *Cyperus* L. (4), *Rumex* L., *Papaver* L., *Geranium* L., *Hypericum* L. ve *Echium* L. (3)'dur. Alanda 4 endemik (*Campanula lyrata* Lam. subsp. *lyrata*, *Verbascum bombyciferum* Boiss., *Ballota nigra* L. subsp. *anatolica* P. H. Davis, *Lavandula stoechas* L. subsp. *cariensis* (Boiss.) Rozeira) ve bir nadir takson (*Pancratium maritimum* L.) belirlenmiştir. Ayrıca, çalışma alanının vasküler bitki çeşitliliğini etkileyen faktörler verilmiştir.

Anahtar kelimeler: Sahil vasküler bitkileri, Kıyı kumulları, Mudanya, Bursa, Güney Marmara**1. Introduction**

Coastal regions are very special areas due to having unusual ecological conditions (i. e. excessive salinity, drought) and the vascular plants which were adapted to these conditions are grown in these areas. Bursa province has a long beach which continues to Yalova province at south of Marmara Sea. A part of 55 km long and 10 km wide of the coast included in Mudanya District. This part of the coast is less rugged and its elevation varied from 80 to 125 metres.

1.1. Geography of the Study Area

Mudanya is situated between 28°-29°E longitude and 40°-41° N latitude in Marmara Region and it is limited with Gemlik District at east, Karacabey District at west, Gemlik Gulf at north and Bursa at south (Figure 1). The Mudanya Mts, lied from Gemlik to Esence (Eşkel) Gulf, occurs a barrier between Bursa Plateau and Marmara Sea. The highest point of study area is Üsküp Hill (600 m) and its important water supply is Nilüfer Stream (Enginalp, 1983). It is located in Mediterranean phytogeographical region and A2 (A) square according to the grid system used in the Flora of Turkey (Davis, 1965-1985).

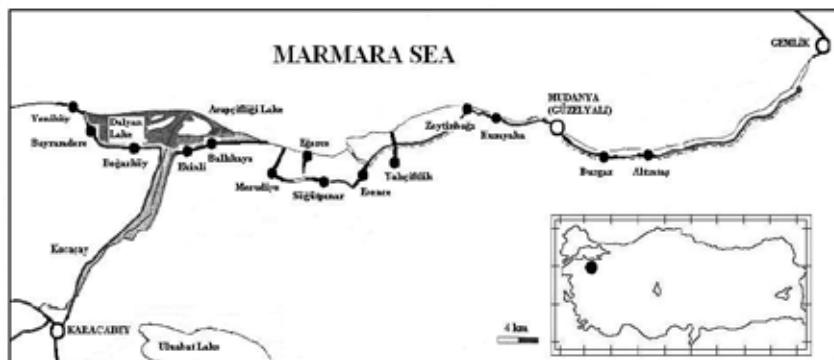

Figure 1. Map of the study area and its surroundings

1.2. Geology, Climate and Vegetation of the Study Area

The main substrate of the study area is constituted of neogenic sedimentary masses i.e. sandstones, marls, limestones (Anonym, 1995). Since a meteorological station is not present in the study area, the climatic data obtained from the meteorological station of Gemlik District, the closest station to Mudanya, were used (Anonym, 1974). According to these data, annual mean temperature is 14.9°C, annual rainfall is 691 mm. The study area is included in Mediterranean climate on the basis of Emberger's drought index ($S=2.1$) and the area belongs to the less-rainy subtype of Mediterranean bioclimatic zone in term of pluviothermic coefficient ($Q=90.2$) (Akman, 1990). The ombrothermic climate diyagram of Gemlik was drawn according to Walter et al. (1975) and given in Figure 2.

There are mainly two vegetation types in the study area. The cost between Altıntaş and Yalıçiftlik is very narrow and it occurs stones or rocks. On the other hand, the cost between Esence Gulf and Mesudiye lies as rather broad dunes. The coastal region is characterized by halophytic vegetation consists of *Atriplex* spp., *Beta maritima* L., *Salsola tragus* L., *Suaeda altissima* (L.) Pall., *Polygonum maritimum* L., *Erygium maritimum* L., *Otanthus maritimus* (L.) Hoffmanns., *Inula viscosa* (L.) Aiton, *Cakile maritima* Scop., *Polycarpon tetraphyllum* L., *Euphorbia peplis* L. and *E. terracina* L.

Dry forest vegetation, from behind of the cost to 100 m, is characterized by *Pinus nigra* Arn. subsp. *nigra* var. *caramanica* (Loudon) Rehder, *P. brutia* Ten., *Quercus infectoria* Oliv. subsp. *infectoria*, *Q. pubescens* Willd. and *Juniperus foetidissima* Willd. Some maquis elements, such as *Laurus nobilis* L., *Arbutus andrachne* L., *Phillyrea latifolia* L., *Quercus coccifera* L., *Pistacia terebinthus* L. subsp. *palaestina* (Boiss.) Engl., *Cistus salvifolius* L., *Rhus coriaria* L., and *Sarcopoterium spinosum* L. are dominant under these forests. Moreover, olive fields occupies large areas in where damaged maquis and dry forests because olive industry is one of the important livelihoods for the local public.

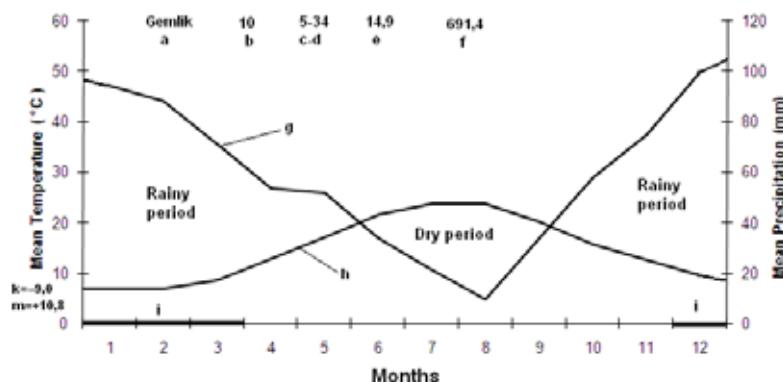

Figure 2. Ombrothermic diagram of Gemlik (Bursa) meteorological station.

a: Station name, b: Station altitude (m), c: The measuring period for temperature (year), d: The measuring period for precipitation (year), e: Annual mean temperature (°C), f: Annual mean precipitation (mm), i: Months with an absolute minimum below 0 °C, g: Precipitation curve, h: Temperature curve, k: Mean minimum temperature of the coldest month (°C), m: Absolute minimum temperature (°C).

1.4. Importance of the Study Area

Many parts of Bursa province have been studied floristically by various researchers (Kaynak and Tuyji, 1991, Günay Daşkin and Kaynak, 2006, Kaynak et al., 2008, Daşkin and Kaynak, 2010 a, b, Özgen 2010, Erdogan et al., 2011). However there is only one studies, conducted in Yeniköy (Karacabey district), about vascular plants grown at the seashores of Bursa (Uslu and Gehu, 1991). Therefore, I believe that this study is contributed to the costal flora of Bursa province. Furthermore, the study area is adjacent to Kocacay Delta which is one of the 122 Important Plant Areas (IPA No: 17) in Turkey defined by Özhatay et al. (2003) and has “Emergency” status for conservation priorities (Figure 1). Since both areas are similar in terms of ecological conditions and floristic elements, determining of vascular plants in Mudanya cost is important for conservation actions in the future.

2. Materials and methods

This study based on 800 herbarium specimens collected from the study area between April 2002 and September 2011. These specimens were identified with the help of the following literature; Davis (1965-1985), Davis et al. (1988), Güner et al. (2000), Tutin et al. (1964-1980), Seçmen and Leblebici (1997), Kaynak et al. (1996), Kaynak et al. (2008). All the plant specimens were stored at the Herbarium of Uludağ University, the Faculty of Arts and Sciences, Biology Department (BULU).

In the floristic list, families, genera and species were arranged in alphabetic order. The author's abbreviations were checked by The International Plant Name Index (2005) (<http://www.ipni.org>). After the species name and authors' abbreviations, the floristic list gives the number of localities, habitats, herbarium accession numbers, phytogeographical regions, threatened categories of endemic and rare taxa (Ekim et al., 2000), and life forms. An asterisk preceding a plant name indicates a new record for the A2 square (Yıldırımlı, 1999; Özgen, 2010). Life form categories were determined according to Raunkiaer (1934).

The abbreviations used in the article are listed as follows: Ch.: Chamaephytes; Crp.: Cryptophytes; E. Medit.: East Mediterranean Element; End.: Endemic to Turkey; Euro-Sib.: Euro-Siberian Element; Hcrp: Hemicryptophytes; Ir.-Tur.: Irano-Turanian Element; LC: Least Concern; Medit.: Mediterranean Element; NT: Near Threatened; Ph.: Phanerophytes; R. Daşkin: Ruziye Daşkin; Th.: Therophytes; VU.: Vulnerable.

3. Results and discussion

800 plant specimens were collected from area between 2002 and 2011. As a result of the identification of these specimens, 252 taxa belonging to 55 families and 181 genera were determined. Two taxa were from the Pteridophyta division, 250 taxa were from Spermatophyta division. Of these, 208 taxa were Dicotyledonae and 42 taxa were Monocotyledonae. Only four taxa were endemic and endemism rate of the area was low (1.6 %).

The floristic results obtained from this study were compared with those of studies carried out in nearby regions (Armutlu, Uluabat Lake, Şile and Çatalca). Medit. elements with 58 taxa (23 %) were found as the most common phytogeographical elements followed by the Euro.-Sib. with 17 taxa (6.8 %) and Ir.-Tur. elements with 2 taxa (0.8 %). 175 taxa (69.4 %) were pluriregional or phytogeographically unknown. In all studies, the number of the Medit. elements is higher than other elements. This can be explained by these areas are located in the Medit. region and Medit. climate

prevails in the areas. When the areas were compared in terms of endemism, the rate of endemic plants in Uluabat Lake and Armutlu is higher than those of the other areas. This can be explained with the influence of excessive urbanization in Mudanya, Şile and Çatalca (Table 1).

According to number of taxa, the largest families in the area are Asteraceae (43), Poaceae (33), Chenopodiaceae (12), Caryophyllaceae (12), Brassicaceae (11) and Apiaceae (11). The comparison of the richest families and genera with neighbouring areas is given in Table 2. Asteraceae, Fabaceae, Lamiaceae and Poaceae that are largest families in Flora of Turkey, are placed in first fifth rank in all areas except for Mudanya District. In the study area, Caryophyllaceae and Chenopodiaceae are placed among first fifth rank families. Although *Trifolium*, *Vicia*, *Lathyrus*, *Medicago*, *Veronica* and *Ranunculus* are the richest genera in the areas, *Atriplex*, *Euphorbia*, *Crepis*, *Plantago* and *Cyperus* are the richest genera in Mudanya District. This situation can be as a result of the study area has different microclimatic and edafical conditions.

Table 1. A comparison between the present study and other studies according to the total number of taxa, phytogeographical distribution (%) and endemism (%)

Research area	Total taxa	Medit.	Euro-Sib.	Ir.-Tur.	Pluriregional	Endemism
Mudanya/Bursa (This study)	252	23	6.8	0.8	69.4	1.6
Uluabat Lake/Bursa (pers. com.)	675	21.3	14.0	1.4	63.3	3.55
Armutlu/Yalova (Kaynak, 1997)	906	23.1	15.1	1.3	60.5	3.6
Şile/Istanbul (cited from Akaydin et al., 2011)	440	19.0	17.2	1.5	62.3	--
Çatalca /İstanbul (Genç and Özén, 2007)	444	20.9	19.4	0.5	59.2	1.57

The distribution of taxa in the study area according to life forms are as follows: therophytes (44.4%), hemicryptophytes (31.3 %), cryptophytes (13.4 %), phanerophytes (7.9 %), and chamaephytes (3.0 %). As stated by Akman et al. (2000), therophytes and hemicryptophytes are the most common life forms in areas where a Mediterranean climate is dominant. Life form spectrum of the study area supports this opinion.

Table 2. A comparison between the present study and other studies in terms of the richest families and genera.

Research area	Families	Genera
Mudanya/Bursa (This study)	Asteraceae (43), Poaceae (33), Chenopodiaceae (12), Caryophyllaceae (12), Brassicaceae (11), Apiaceae (11)	<i>Atriplex</i> (6), <i>Euphorbia</i> (5), <i>Crepis</i> (4), <i>Plantago</i> (4), <i>Veronica</i> (4), <i>Cyperus</i> (4)

3.1. Factors Affecting Vascular Plant Diversity of the Study Area

Urbanization, excessive construction, and partially grazing are the main factors for damages to plant diversity in the area. Mudanya (Güzelyalı), Burgaz, Kumyaka, Altıntaş, Zeytinbağı (Trilye) have completely urbanized and the cost of these areas have conspicuously narrowed (Figure 3). On the other hand, Yalıçiftlik, Esence, Söğütpinar, Eğerce and Mesudiye are under excessive construction pressure. The construction of summer resorts, pensions and sheds for summer tourism on both coastal region and slopes behind of the cost is the most important problem in these areas. Grazing is a less important factor than the others and only effective in the cost of Söğütpinar and Mesudiye.

These factors have been limited habitats of the plants and their populations have decreased. Especially *Pancratium maritimum* L., known as Sand lily, is very important. The species is not endemic, but included in VU category (Ekim et al., 2000). Although, it is distributed on dunes of the coasts of Marmara, Black Sea and Mediterranean in Turkey, the habitats of the species have been damaged because of tourism and its relative activities (Figure 4).

Acknowledgements

The author thanks Prof. Dr. Gönül Kaynak (Uludag University, Biology Department) for help during identification of some plant specimens and Kürşad Daşkin for help during field work.

Rubia peregrina L., 11, on slopes, BULU 33584, Medit., Hcrp.

44. Santalaceae

Osyris alba L., 11, on slopes, BULU 33597, Medit., Ph.

45. Scrophulariaceae

Kickxia elatine (L.) Dumort. subsp. *crinita* (Mabille) Greuter, 2, on dunes, BULU 14660; 8, in stony places, BULU 33567, Medit., Th.

Misopates orontium (L.) Raf., 15, in stony places, BULU 33455, Th.

Parentucellia latifolia (L.) Caruel subsp. *latifolia*, 4, on dunes, BULU 18066, Medit., Th.

Verbascum sinuatum L. var. *sinuatum*, 7, on dunes, BULU 23172, Medit., Hcrp.

V. pinnatifidum Vahl, 1, on dunes, BULU 14633; 6, on dunes, BULU 23174, E. Medit., Hcrp.

V. bombyciferum Boiss., 11, on slopes, BULU 33591, Euro.-Sib., End., NT., Hcrp.

Veronica anagallis-aquatica L., 2, in wet places, BULU 14676; 13, in wet places, BULU 33422, Th.

V. cymbalaria Bodard, 3, on dunes, BULU 18042; 4, on dunes, BULU 18068, Th.

V. persica Poir., 13, in wet places, BULU 33410, Th.

V. polita Fr., 4, in wet places, BULU 18067, Th.

46. Solanaceae

Solanum nigrum L. subsp. *nigrum*, 1, on dunes, BULU 14625; 11, on slopes, BULU 33571, Th.

47. Tamaricaceae

Tamarix smyrnensis Bunge, 5, in wet places, BULU 18099, Ph.

48. Urticaceae

Parietaria judaica L., 1, on rocks, BULU 14628; 13, on rocks, BULU 33408; 20, on rocks, BULU 33441, Hcrp.

49. Verbanaceae

Phyla canescens (Kunth) Greene, 6, in wet places, BULU 23175, Hcrp.

Verbana officinalis L., 2, in wet places, BULU 14658; 6, BULU 23173, Hcrp.

Vitex agnus-castus L., 17, on dunes, BULU 33497, Medit., Ph.

50. Zygophyllaceae

Tribulus terrestris L., 2, on dunes, BULU 14679, Th.

MONOCOTYLEDONAE

51. Amaryllidaceae

Pancratium maritimum L., 3, on dunes, BULU 23183; 16, on dunes, BULU 33475B, Medit., Rare, VU., Crp.

52. Cyperaceae

Cyperus capitatus Vand., 1, on dunes, BULU 14624; 5, on dunes, BULU 18103, Crp.

C. fuscus L., 2, on dunes, BULU 14684, Euro-Sib., Crp.

C. rotundus L., 2, on dunes, BULU 14685, Crp.

Scirpooides holoschoenus (L.) Soják, 1, on dunes, BULU 14622; 7, on dunes, BULU 23186, Crp.

53. Juncaceae

Juncus compressus Jacq., 1, on dunes, BULU 14623, Crp.

54. Liliaceae

Asparagus acutifolius L., 2, on rocks, BULU 14657; 17, on dunes, BULU 33498, Crp.

Allium neapolitanum Cirillo, 13, on rocks, BULU 33416, Medit., Crp.

Ruscus aculeatus L., 11, on slopes, BULU 33598, Crp.

55. Poaceae (Gramineae)

Aeluropus littoralis (Gouan) Parl., 15, in wet places, BULU 33455, Crp.

Agropogon x littoralis (Sm.) C. E. Hubb., 13, in wet places, BULU 33423, Medit., Crp.

Ammophila arenaria (L.) Link subsp. *arundinacea* H. Lindb. f., 1, on dunes, BULU 14645, Medit., Crp.

Avena sterilis L. subsp. *sterilis*, 13, on rocks, BULU 33424, Th.

Bromus rigidus Roth, 13, on rocks, BULU 33433, Th.

B. tectorum L., 5, on dunes, BULU 18104, Th.

Calamagrostis pseudophragmites Link ex Rchb., 11, on slopes, BULU 33595, Euro-Sib., Crp.

Catabrosa aquatica (L.) P. Beauv., 15, in wet places, BULU 33456, Crp.

Crypsis alopecuroides Schrad., 17, on dunes, BULU 33503, Th.

Cynodon dactylon (L.) Pers. var. *dactylon*, 1, on dunes, BULU 14644; 7, on dunes, BULU 23190, Crp.

Cynosurus echinatus L., 1, on dunes, BULU 14640, Medit., Th.

Dactylis glomerata L. subsp. *hispanica* (Roth) Nyman, 13, in wet places, BULU 33414; 11, on slopes, BULU 33576, Crp.

Echinochloa colonum (L.) Link, 2, on dunes, BULU 14686, Th.

E. crus-galli P. Beauv., 2, on dunes, BULU 14654, Th.

Elymus elongatus (Host) Runemark subsp. *turcicus* (P. E. MacGuire) Melderis, 1, on dunes, BULU 14642, 5, on dunes, BULU 18105; 7, on dunes, BULU 23185, Crp.

E. farctus (Viv.) Runemark ex Melderis subsp. *farctus* var. *farctus*, 1, on dunes, BULU 14641, Crp.

E. repens (L.) Gould subsp. *repens*, 11, on slopes, BULU 33577, Crp.

Hordeum bulbosum L., 20, on dunes, BULU 33443, Crp.

Lagurus ovatus L., 1, on dunes, BULU 14643; 7, on dunes, BULU 23188, Medit., Th.

Lolium perenne L., 15, in wet places, BULU 33468, Crp.

Melica ciliata L. subsp. *ciliata*, 13, on rocks, BULU 33435, Crp.

Parapholis incurva (L.) C. E. Hubb., 15, on dunes, BULU 33449, Th.

Phleum pratense L., 7, on dunes, BULU 23187, Euro-Sib., Th.

Phragmites australis (Cav.) Trin. ex Steud., 18, on dunes, BULU 33501; 9, in wet places, BULU 33507, Euro-Sib., Crp.

Piptatherum miliaceum (L.) Coss. subsp. *thomasi* (Duby) Freitag, 11, on slopes, BULU 33595, Crp.

Polypogon monspeliensis (L.) Desf., 15, in wet places, BULU 33457, Th.

P. viridis (Gouan) Breistr., 2, on dunes, BULU 14683, Euro-Sib., Crp.

Rostraria cristata (L.) Tzvelev var. *cristata*, 15, in wet places, BULU 33457, Th.

Setaria viridis (L.) P. Beauv., 2, on dunes, BULU 14682, Th.

Sporobolus virginicus (L.) Kunth, 17, on dunes, BULU 33501, Crp.

Sorghum halepense (L.) Pers. var. *halepense*, 13, on rocks, BULU 33436; 11, on slopes, BULU 33606, Crp.

Trachynia distachya (L.) Link, 13, on rocks, BULU 33434, Medit., Th.

Tragus racemosus (L.) All., 7, on dunes, BULU 23189, Th.
